DETAILED ACTION

Information Disclosure Statement

The information disclosure statement filed through April 8, 2008 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. It has been placed in the application file, but the information referred to therein has not been considered.

The information disclosure statement filed through April 8, 2008 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because the statement made under rule 97(e) does not state that the search report is based on a foreign counterpart application, as required by that rule. It has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609.05(a).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 3749

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* **v.** *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 8-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tatsutani et al. (US 5,459,944) in view of Fine (US 2,853,691) in view of Carlson (2,859,535). The claims are reasonably and broadly construed, in light of the accompanying specification, to be disclosed by Tatsutani as comprising:

a hand inserting portion **5** having a concave shape including a front inner wall facing a back inner wall;

an airflow generator **7** that generates high-pressure airflows. Tatsutani discloses the claimed invention except for the claimed first air nozzle and second air nozzle that inject the high-pressure airflows generated by the airflow generator to the hand inserting portion, wherein the first air nozzle is provided on the front inner wall and the second air nozzle is provided on the back inner wall. Fine, another hand dryer discloses first and second nozzles at column 1 line 61 through column 2 line 19. It would have been obvious to one skilled in the art to combine the teachings of Tatsutani with first and second nozzles, as disclosed in Fine for the purpose of producing improved heating

Art Unit: 3749

with a minor expense and efficient operation. Furthermore, Tatsutani in view of Fine discloses the claimed invention except for the claimed first air nozzle includes a plurality of slit-shaped first holes arranged in a line, each having a first length, and a plurality of first intervals, each having a third length, between the first holes, the second air nozzle includes a plurality of slit-shaped second holes arranged in a line, each having a second length, and a plurality of second internals, each having a fourth length, between the second holes, and the first length and the second length are different. Carlson, another hand dryer discloses that feature at column 1 lines 63-69 and as shown in figures 1-2. It would have been obvious to one skilled in the art to combine the teachings of Tatsutani in view of Fine with slits of different lengths for the purpose of more efficiency by utilizing more of the warm exhaust air for drying purposes. Tatsutani discloses the first and second air flow colliding feature on the face of that reference.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 8-21 provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 11-20 of copending

Application No. 11/585,143 in view of Carlson. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been an obvious to one skilled in the art to combine the slits of Carlson with the copending application for the purpose of providing an efficient flow.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen Gravini whose telephone number is 571 272 4875. The examiner can normally be reached on normal weekday business hours (east coast time).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steven B. McAllister can be reached on 571 272 6785. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

July 26, 2008 /Stephen Gravini/ Primary Examiner, Art Unit 3749
